

Moniteur Du Vin

Moniteur Du Vin layout.

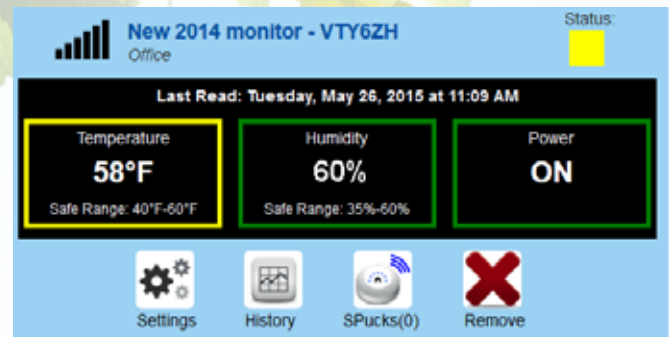

Wine is your passion. Preserving it is ours.

Moniteur Du Vin is a device that keeps you and your wine collection connected- even from the opposite side of the country! Moniteur Du Vin is a cellular-based monitoring application that can alert you of changes in the temperature, humidity or power usage in your wine cellar. When a change in status is detected, an alert is immediately sent via text, call or email. The device can be accessed remotely to change the safe ranges of temperature, humidity and power.

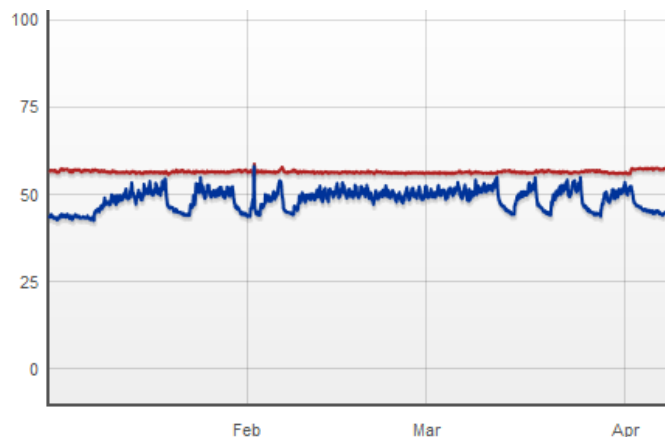

Since the application is cellular-based, no internet Wi-Fi is needed for it to work. Additionally, the device is powered by a self-charging, internal lithium ion battery. If the power goes out, the device will continue working.

Features

- Provides a historic record of storage conditions of your prized wine collection
- Monitors temperature, humidity and power usage
- Cellular based (No Wi-Fi or phone line needed)
- Sends an alarm if cellar is outside your acceptable temperature range or during power outage
- The alarm may be with a call, text or email
- Allows remote setting and changes of safe ranges
- Can keep working through power outages with an internal, self-charging battery (Lithium-Ion)
- Data is recorded hourly for view on website
